Part # TMC-1/228-SS, TMC-1/228-BLK, TMC-1/228-TIN

Lakeline $\frac{1}{2}$ x 28 thread Micro Compensator Installation Instructions

Included:

- Lakeline Micro Compensator
- Viton Square section o-ring size -013

The compensator fits barrels threaded with $\frac{1}{2}$ x 28 threads and is designed for 9mm rounds.

Install the o-ring onto the barrel first. Get all the twists out of it and have it back against the flange at the end of the threads on the barrel.

Thread on the compensator. To align the compensator, there is a long flute (marked with the blue arrow in the photo below) that should line up at the top of the pistol with the front sight so the gas port is properly aligned.

The o-ring allows the port to be aligned and it can be compressed enough to keep tension on the threads so the compensator stays clocked into proper alignment. If desired, some low strength (green) thread locker can also be used in addition to the o-ring.
