

LAKELINE LLC

Lakeline PT111 G2, PT140 G2, 709 and 740 Firing Pin and Firing Pin Return Spring Installation Instructions:

This installation is only recommended to be done by a qualified gunsmith.

Modifications to your pistol are done at your own risk.

Tools required:

- Eye protection
 - Flat Blade Screwdriver
 -
1. Check that pistol is unloaded and remove magazine.
 2. Check one more time that pistol is not loaded.
 3. Field strip pistol per the Taurus Instruction Manual and make sure the Taurus Security System is completely in the unlock position.
 4. You should have your slide, and the tool you will use to press the striker guide forward to release the back plate looking something like this:

5. To remove the back plate on the slide, the striker guide must be pressed using your tool towards the muzzle and the back plate slides down and out. Here as shown in the

photo below:

6. Remove the back plate so you have your slide looking like this:

7. Slide out the striker assembly:

8. A trick for taking the striker assembly apart is to insert it into the striker channel backwards so the spring is easier to compress to remove the keepers. This is also the part you want to be extra sure to have your eye protection on for. Here is

LAKELINE LLC

how the slide is used to help:

9. When you compress the spring from the top (muzzle end) of the striker, the keepers can be slid out each side. You can see how the keeper works from the disassembled striker below:

10. Replace both springs. Both springs should be replaced at the same time. Reverse the disassembly process and assemble the striker assembly:

11. Clean everything, the striker assembly, the striker channel, etc. Put the striker assembly into the slide, and depress it using your screwdriver or a punch far enough where you can reinstall the back plate:

12. The back plate should click into place:

13. Re-assemble the pistol in the standard way and check functionality.
